

### CONDUIT RODDERS

Our range of Conduit Rodders have a 1mm internal copper wire inside the fibreglass core so it can be used for tracing underground services if required.

All units are supplied on a sturdy steel frame with a chrome finish. The 9mm and 11mm rodders have large rubber pneumatic tyres on the frame to make handling easier.

The rod is terminated to the frame so if tracing is required you can attach your transmitter clamp directly to it to gain continuity.

For conduits up to 50mm diameter we recommend the 4.5mm OD Rodder. For conduits between 50mm and 80mm we recommend the 6mm OD Rodder. Between 80mm and 100mm we recommend the 9mm OD Rodder. The 11mm Rodder is recommended for conduits 100mm and above.

There is a range of accessories available – repair kits, refill coils, spring leaders, hauling eyes. We can also arrange sondes to suit if required.

4.5mm x 60m

#### TIPS!

A spring leader will help protect the end of your rod when going around bends or hit minor blockages.

Keep the rod clean by wiping with a rag as you are rewinding. This will lengthen the life of the roller guide by reducing damage from debris.

6mm x 100m

9mm x 100m

11mm x 200m
