

TELPRO PANELLIFT

## PLASTERBOARD CART

The innovative Telpro Panellift Material Handling Carts have been proven to be the most versatile, reliable carts available. Originally designed to carry quantities of plasterboard and similar materials, these Carts have since developed demand in many construction related industries, including use with metal works, pipe works, fencing and so on.

These Carts are ergonomically designed to ensure easy manoeuvrability on the job site, able to fit through narrow spaces and in and around tight corners. Furthermore, they can quickly and effortlessly convert to a flatbed when required on the job site.

The unit itself only weights 39kg whilst being able to carry a maximum weight of 1.8 tons (1800kg). The upright handles dismantle in seconds for transportation and storage; furthermore once the upright handles are stowed, they form a carry handle for easy user handling.

The carts are available with optional braking and swivel lock casters, depending on the user requirements. A Skid Plate base panel is also available, which expand the Carts uses; such as transporting equipment or smaller material around the job site.

### FEATURES:

- Carry handle and easy dismantling for efficient transportation and storage
- On-board storage for upright handles once dismantled
- Easily converts to a flatbed multi-purpose cart
- Ergonomic design for ultimate job site manoeuvrability
- Ultra heavy duty construction supporting its huge weight capacity
- Optional 'Skid Plate' base panel available for smaller material handling
- Ability to team with the 'Spanning Platform' to create a 'Super Sized Cart'

## PLASTERBOARD CART SPANNING PLATFORM

**THIS VERSATILE PLATFORM TEAMS WITH TWO OF THE CD136 PLASTERBOARD CARTS TO FORM A SUPER SIZED CART, USED TO TRANSPORT LARGE PACKS OF MATERIAL AROUND A CONSTRUCTION SITE.**

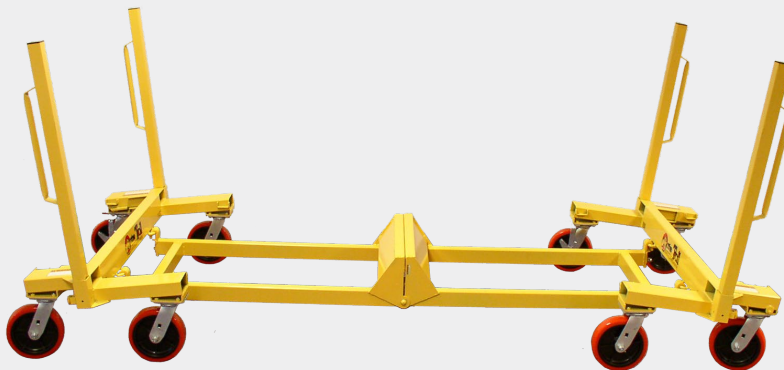

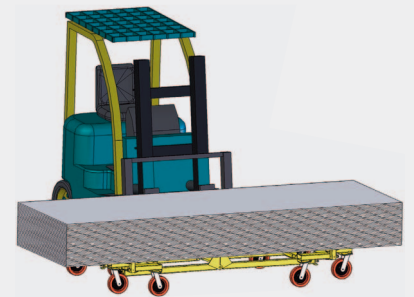

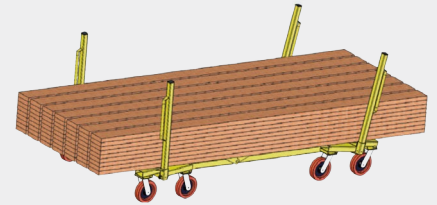

Once quickly assembled, this unique system allows the operator to forklift units of material onto the cart and then easily proceed to manually wheel and manoeuvre the material around the job site. As well as the ability to load the cart with a forklift, the ultra heavy duty construction allows the platform system and its load to also be lifted by forklift, if the load needs to be delivered to alternate levels on the job site.

This unit has proven an ideal solution for many construction related industries; namely the plasterboard trade. The CD272 saves the need of stacking plasterboard vertically which poses a major hazard on the job site and also the double handling the plasterboard; once the CD272 is loaded it can be wheeled directly to the plasterboard hanging location.

As well as having a Load Rating of over 1.8 tons, it has the provision to store any length of plasterboard over 2.4m in flat packs. Not only is this exceeding all set and recommended safety standards, it's also highly practical, efficient and major safety solution for the plasterboard contractor.

### SPECIFICATIONS

- 2743mm Long
- 1219mm Wide
- 1.8 tons (1814kg) Load Rating
