

MC12PMB Control For WA.....MC Series Load Banks

The MC12PMB control panel is standard on all WA.....MC portable type load banks. The control panel features a touch type keypad and LED load display, with simple operation of the load bank start up, kilowatt selection and load bank status. The unit automatically configures the load steps in the load bank to provide instant kilowatt response as selected by the Up/Down keys. Other features include load bank "system check" which prevents loading in the event of fan cooling failure, fan reversal or high temperature. Automatic fan cool-down period is applied when the fan stop or load dump is activated.
